

HARNESS FOR ATTACHING CAMERA TO USER

ABSTRACT

[0161] A configurable wrist or arm worn camera harness (1a) that facilitates convenient carry, access, and secure use of a camera during participation in a physical activity. Camera harness (1a) is comprised of an adjustable strap system for attaching harness (1a) to operator wrist or arm and a coupling system for attaching, one at a time, cameras of various shapes and sizes to aforementioned harness (1a) in a either a manner that allows camera to be moved pivotably while attached to harness (1a) and operator or in a manner that secures camera in a fixed, non-pivoting position. A clasping system is incorporated to harness (1a) to secure camera in a first secure flat carry position on operator wrist or arm. Clasping system can be released by operator to allow camera to be pivotably moved upright into a second secure position for the purpose of taking a photograph. Regardless of pivotal orientation of camera or closure state of clasping system or manner of camera attachment to user, harness (1a) maintains attachment of camera to operator in any event.
